### ***Double Patenting***

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 14-19 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 14-19 of copending Application No. 10/961506. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. The rejection can be overcome by cancelling the claims from either application.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory

Art Unit: 2629

double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-13 and 25-37 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 10/961506 in view of Liu (US 6,914,649 B2).

First, both claim 1 of the application and claim 1 of 10/961506 teaches the subpixel repeating group: W W W W

R G C B

W W W W

C B R G. Rejection is complete on this finding alone.

Second, claim 1 of the application teaches repeating subpixel groups:

R B G W and R G B W

G W R B      B W R G, while claim 1 of 10/961506 teaches repeating subpixel groups:

W G B R and W B G R

B R W G      G R W B. The groups are not identical, however each group is the mirror image of the other group in respective claims.

Liu teaches a display of sub-pixel groups. In particular, Liu teaches that each sub-pixel group (also called pixel array) has an adjacent sub-pixel group that is a mirror image of the previous sub-pixel group (fig. 4; column 3, lines 14-47). Liu further teaches that, by manufacturing the sub-pixel groups in this fashion, each color also "forms" its

Art Unit: 2629

sub-pixel groups. Subsequently, the adhesion strength of the sub-pixels is increased to avoid peeling from the substrate (column 3, line 48 through column 4, line 10).

Moreover, one of ordinary skill in the art would recognize that a subpixel group and its mirror image subpixel group would have identical light output and thus functionally equivalent.

Therefore, it would have been obvious, based on Liu's teaching, to at least implement a mirror image type of repeating subpixel group, as an alternative.

Claims 2-13 and 25-37 are similarly rejected.

This is a provisional obviousness-type double patenting rejection.
